Performance

The table compares the fund performance with the ARC Private Client Indices (PCI) benchmark, a measure of a peer group of similar investment managers using similar asset allocations. The comparator benchmark is an indicator of similar investment strategies and does not show future returns or investor expectations. ARC monthly data is estimated and may vary from actual performance. ARC data is then confirmed at the end of each quarter, which could change monthly returns.

Past performance is not a guide to future performance

Monthly Market Commentary - May 2024

Global equities reversed losses experienced in last month's selloff, returning 2.3% in sterling terms in May, a rise that was largely supported by strong US tech corporate earnings. Additionally, lower inflation data increased expectations that major central banks would start cutting interest rates more quickly. This supported the global aggregate bond market, which rose by 0.9%. The strongest performing developed equity region was US technology large-cap stocks, returning 5.2%. This strong performance was fuelled by the resilient US tech corporate earnings reported throughout May. Europe and the UK also performed well, returning 3.5% and 2.1% in May, respectively. Both the European Central Bank and the Bank of England are likely to take a less aggressive stance on monetary policy, with interest rate cuts expected at their next scheduled meetings. Although Chinese equities rebounded, positive momentum drifted away from Emerging Markets, which fell 1.1% in May. Election results in countries like Mexico, India, and South Africa caused wide swings in currency markets, creating a volatile environment for equities in this region. The relentless fall in the Yen, which prompted Japanese intervention in May to stabilize the currency, saw Japanese equities extend their losses, falling by 0.3%.

Commodities underperformed both equity and bond markets, with the broader commodity index falling 3.5% in May. This was largely driven by the performance of Brent crude oil, which fell 7.6%, as a result of weakening demand with OPEC agreeing a complex deal to extend production cuts in to next year.

Fund Objective

The main objective of this fund is to maximise potential return for a given level of risk.

Investment Strategy - Cautious

To achieve the fund objective the Manager will use investments in collective investment schemes such as unit trusts, OEICs and other UCITS funds and closed ended schemes. Where appropriate the Manager may also invest in individual stocks, bonds, and derivatives ensuring the fund has a diversified portfolio of assets.

Some of these investments will be denominated in foreign currencies which may or may not be hedged back to Pounds Sterling to help reduce currency risk. The proportion of the fund invested in riskier assets such as equities (company shares) is consistent with the funds' Investment Objective.

Generally, 45% of this fund is invested in equities but this figure may change by a maximum of $\pm 12.5\%$ in the short term depending on variations in the stock markets, or in the longer term to keep the fund within its' risk boundaries.

Who is this fund for?

This fund may be suitable for: An investor seeking to maintain capital over the medium to long term. An investor who is prepared to accept a lower investment return than equity markets over the longer term in exchange for trying to minimise potential losses. Someone who accepts that the fund will be subject to fluctuations in value.

Fund Important Note

Please be aware that adjustments to previously reported data can occur. The value of investments and the income from them can fluctuate and it is possible that investors may not get back the amount invested.

Data Definitions

Inception: The date at which the fund was first managed. This can be found at the top left corner of the investment growth graph.

Benchmark: ARC Private Client Indices – The performance comparator provided in the cumulative return chart and the performance table below. The comparator benchmark(s) shown are representative of the risk/return of the Tatton fund.

Ongoing Charges to the Funds (OCF) is made up of the Annual Management Charge and additional expenses. Additional expenses may be deducted from some funds. These may include, third party administration, trustee, registrar, auditor and regulator fees. As the additional expenses relate to the expenses incurred during the fund management process, they will regularly increase and decrease as a percentage of the fund.

Transaction Cost is the estimated charge for the fund that may be incurred as a result of the acquisition and disposal of investments. The charge is forward looking and used for pre sale reporting.

12 Month Yield: Is the sum of a fund's total trailing 12-month interest and dividend payments divided by the last month's ending share price (NAV) plus any capital gains distributed over the same period.
